Hands-free Access

Time Attendance

Monthly Report

- ✓ Hands-free access
- ✓ Long Range Identification
- ✓ Time & Attendance
- ✓ Automation System

Why active?

The latest RFID access control system offered by Hong Kong RFID Ltd. is an active access control system. Why active?

Powerful Reading Performance

Compared with passive RFID (battery-less) technology, active RFID technology allows a much longer reading distance. With such powerful performance, no longer does one need to even more a fingertip for accessing a certain location.

Less Constraint

What's more is that active access control system is

less influenced or affected by environmental constraints such as liquid and metal factors, allowing uses in different operating environment.

Flexible and Automated

Access control can be performed as soon as people carrying the tag walk towards the entrance. Entry and exit records are logged without having the card placed near the reader for recognition.

Active RFID offers a more flexible and automated access control solution

Our 2.4GHz Active RFID Series

Empress 2.4GHz Active Stationary Reader

Empress 2.4GHz Active Short Range Reader

Empress 2.4GHz Active Handheld Reader

Hussar Slim 2.4GHz Active RFID Tag

Hussar Slim 2.4GHz Active Tag Accessories

2.4GHz Active RFID for Access Control Solutions Applications in Luxury Residential Area

Lobby - Hands-free Access

Door will automatically unlock when it detects the Active tag.

Mailbox - Automatically unlock
